Advantages of Seneca Fabric Doors

Easy to Assemble

Seneca's fabric doors consists of an easy-to-assemble 14ga. galvanized track system, galvanized cross pipes, pre-sewn fabric and a simple hand crank and cable pulley system.

Mounts Inside or Outside

Regardless of where you intend to use them, Seneca's fabric doors are the perfect fit, mounting both on the inside or outside of your frame, whether indoors or out.

Heavy Duty Fabric Pockets

Our cross support pipe pockets are welded and sewn for added durability and years of problem-free use.

Great for both Wood and Steel Structures

Seneca Fabric Curtains mount on most any permanent structure, including wood and Steel barns and warehouses.

Free Floating Cable System

Seneca's unique Free-Floating cable system allows cross pipes to move independently and won't bind up if they go up or down slightly unevenly.

Easy Cross Pipe Replacement

Ever backed into your fabric door system with a skid steer? If so, you know first-hand how difficult and frustrating it can be to replace a single bent cross pipe with our competitors' fabric curtains.

Seneca Fabric Curtain Systems utilize cross pipe Inserts in the ends of every steel cross pipe so replacing one pipe is as easy as:

1. Lifting one end of the bent pipe up the Free Floating Cable System until it is free from the galvanized track.
2. Removing our unique end piece and sliding the pipe out of the fabric.
3. Replacing the damaged piece with another straight length of pipe.

Never drill holes or disassemble your entire door & track system again!

Seneca's unique end piece slides on each cross pipe for easy removal.

Seneca Fabric Door Specs

Heavy Duty Fabric

The fabric on all of our Seneca Fabric Doors is a **25oz.** White Opaque PVC Coated Fabric so that it will hold up to the sun's UV rays and virtually any climate.

Folded horizontal pockets for cross pipes. Pockets are welded with a 1" wide weld and stitched to reduce peeling effect.

Cross Pipes

Cross Pipes are **10ga 2.375"** galvanized steel tubing on doors 14' and larger and **12ga 1.900"** galvanized steel tubing on doors less than 14' wide. Every cross pipe is fitted with Seneca's Pipe End Inserts for easy replacement, should they be accidentally damaged.

Standard Sizes

Heights:

8' - 16'
in 1' increments

Widths:

Variable up to 18'

Call us to inquire about custom sizes.

Expect longer turnarounds on custom orders.

Powered Operation

We also offer a manual powered option to provide faster and easier, worry-free operation.

Manual Operation

Our standard fabric doors include a hand crank system for reliable manual operation.

Galvanized Pocket

All of Seneca's fabric doors feature a heavy-duty 14ga sheet metal pocket with a reinforced outer edge to resist flexing and bending.

The galvanized pocket is an open channel, free from permanent tracks or cables which could cause binding and resistance. Seneca's Free Floating Cable System allows the fabric and cross pipes to move freely within.
